EXECUTIVE SUMMARY

Director of Engineering & Architecture with 14+ years of progressive experience building and scaling engineering organizations, leading complex modernization programs, and delivering cloud-native, AI-enabled platforms across education, agriculture, and logistics domains. Built engineering teams from 0 to 100+ members while maintaining hands-on architecture ownership in high-stakes delivery environments.

Known for combining organization leadership with technical depth across .NET, AWS, Azure, microservices, serverless systems, data platforms, and AI enablement. Champion for engineering excellence through AI-assisted development, running pilot programs in agentic AI and advanced development workflows while establishing guilds for Claude, GitHub Copilot, and modern engineering practices.

Leadership Impact: Led distributed teams across onshore/offshore locations. Drove 40-55% infrastructure cost reductions. Delivered platforms supporting $5M+ operations with 99.9%+ uptime. Established engineering culture achieving 80%+ test coverage and daily deployment cadence.

CORE COMPETENCIES

Engineering Leadership & Organization Building
Team Scaling (0 to 100+) • Distributed Team Leadership • Stakeholder Management • Engineering Culture • Performance Management • Hiring & Talent Development • Organizational Design • Execution Excellence • Agile Delivery

Platform Engineering & Cloud Architecture
.NET Ecosystem • Microservices • Serverless • Event-Driven Architecture • Domain-Driven Design • API Design • AWS (Lambda, ECS, API Gateway, DynamoDB, Bedrock) • Azure (AKS, Kubernetes, Service Fabric) • Infrastructure as Code

AI & Modern Engineering
AWS Bedrock • Azure AI • Agentic AI • Claude Code • GitHub Copilot • LLM Integration • AI-Assisted Development • Pilot Programs & PoCs • Developer Productivity Guilds • Model Evaluation

Data & Analytics
Data Warehouse Design • ETL Pipelines • SQL/NoSQL (MS SQL, PostgreSQL, MySQL, DynamoDB, Neo4j) • Analytics Platforms • Data Architecture • TimestreamDB • AI/ML Integration

Integration & Platform
Kafka • REST/GraphQL APIs • Gateway Patterns • Event Grid • Message Queues • Platform Unification • Cross-Product Connectivity

---

PROFESSIONAL EXPERIENCE

CES

Director - Engineering & Architecture

April 2024 – Present

Leading modernization of legacy recruitment and hiring platform for one of the largest US K-12 education organizations while building distributed engineering teams and driving AI enablement strategy across the organization.

Organization & Delivery Leadership

- Built and scaled engineering teams across onshore and offshore locations, establishing delivery rhythm, engineering accountability, and quality execution for time-boxed, high-stakes transformation programs
- Led multiple scrum teams through product engineering model, aligning business priorities, product direction, platform evolution, and delivery outcomes across interconnected HR domain products
- Managed director-level stakeholder relationships across business, product, platform, architecture, and engineering leadership to maintain alignment, decision velocity, and execution momentum
- Drove platform unification across HR pillar products improving interoperability, shared capabilities, and cross-product connectivity between legacy and modern systems

AI Enablement & Modern Engineering

- Running pilot programs and PoCs for advanced AI and development use cases including agentic AI workflows, AI-enabled development tooling, and autonomous code generation patterns
- Established Claude Code and GitHub Copilot guilds across engineering organization, training 50+ developers on AI-assisted development practices and improving delivery productivity 30%+
- Implemented AWS Bedrock-based solutions including RAG systems and structured data extraction achieving 95%+ accuracy while optimizing model selection for cost, latency, and quality
- Led architecture validation and external review processes including Bain-led business study validation for modernization strategy and technology roadmap

Architecture & Platform Delivery

- Owned architecture validation, solution design, technology selection, and delivery guardrails as hands-on architect in day-

to-day execution, guiding design decisions and resolving technical blockers
- Defined large-scale integration architecture across Kafka, AWS services, APIs, and gateway-led connectivity supporting platform interoperability and scalable enterprise workflows
- Strengthened production operations through monitoring, observability, alerting, and proactive issue management reducing operational incidents 45%
- Drove data warehouse and analytics platform modernization including ETL pipeline design, data architecture patterns, and AI/ML integration for predictive analytics capabilities

---

Solutions Architect (Director-Level Scope)

April 2022 – March 2024

Led solution architecture for cloud-native and modernization initiatives while remaining directly involved in implementation, project execution, and engineering enablement across logistics and hospitality domains.

Logistics Platform Modernization

- Architected complete rewrite of legacy MVC/AngularJS logistics platform to Blazor WASM/Server hybrid supporting 500K+ daily transactions with 45% load time reduction
- Designed Azure Service Fabric integration with Blazor components, established shared libraries, and built reusable component ecosystem across 20+ modules
- Secured $2M+ modernization investment through PoC validation demonstrating Auth0 and Azure AD integration feasibility with hands-on implementation of core services
- Established CI/CD pipelines using Azure DevOps enabling daily deployments and reducing release cycle from 2 weeks to 2 days

Hospitality Loyalty Platform (Green Field)

- Architected microservices-based loyalty platform on Azure Kubernetes Service following Domain-Driven Design with 6 bounded contexts

- Led team of 6 engineers with hands-on contribution to core services, delivered MVP in 5 months supporting 100K+ members with 99.95% uptime and sub-200ms response times
- Designed backend architecture leveraging Azure SQL, Event Grid, Front Door, DNS, Application Insights for comprehensive observability

Agriculture Cloud Migration

- Led architectural redesign of 3 legacy .NET MVC applications, migrating to containerized .NET Core APIs on AWS ECS reducing infrastructure costs 55% ($180K annually)
- Designed multi-database architecture integrating MS SQL and Neo4j graph databases for genomics data with shared access patterns
- Migrated common services to AWS Lambda functions reducing code duplication 40% while collaborating with 15-member cross-functional team

---

Technical Architect

April 2019 – March 2022

Architected serverless microservices platform and established mobile engineering practice with hands-on technical leadership and direct contribution to core platform services.

Serverless Platform & Data Engineering – Agriculture Domain

- Designed comprehensive serverless architecture on AWS leveraging Lambda, API Gateway, DynamoDB, PostgreSQL, SQS, Cognito, and S3 supporting $5M+ annual operations
- Built data warehouse and ETL pipelines for agricultural analytics, enabling predictive models for crop optimization and yield forecasting
- Developed Docker-based acceptance testing framework enabling automated integration testing across 20+ microservices achieving 80%+ coverage
- Designed legacy database integration layer supporting gradual migration with zero downtime for 10-year-old SQL Server systems

- Mentored team of 25 engineers across distributed locations in serverless patterns, AWS services, and microservices architecture

Cross-Platform Mobile Engineering

- Led technical architecture and development of Xamarin.Forms applications serving 50K+ agricultural professionals with 4.5+ star ratings
- Designed offline-first architecture supporting field operations with intermittent connectivity and sync conflict resolution
- Built Xamarin.UITest automation framework achieving 70% UI test coverage reducing regression testing time 80%

Career Progression at CES

Associate Technical Architect | April 2017 – March 2019
Contributed to cloud-native architecture design and implementation. Established engineering standards and mentored development teams.

Senior Software Engineer | November 2015 – March 2017
Delivered full-stack .NET applications with focus on quality engineering, TDD practices, and CI/CD workflows.

Earlier Experience

Software Engineer, Vofox Solutions | July 2013 – November 2015
Developed enterprise web and mobile applications. Recognized as Best Upcoming Developer (2013).

Software Developer, Essel Swolutions | January 2012 – July 2013
Built .NET web applications and established enterprise software development foundations.

DOMAIN EXPERTISE

- **Education:** K-12 platforms, recruitment systems, hiring workflows, HR product unification, large-scale SaaS delivery
- **Agriculture:** Cloud-native platforms, mobile applications, data analytics, genomics systems, field operations
- **Logistics:** Web platform modernization, supply chain systems, enterprise integration, real-time processing

---

TECHNICAL CONTRIBUTIONS & STANDOUT ACHIEVEMENTS

Developer Community Leadership (10k+ Stack Overflow Reputation)

- Active Stack Overflow contributor with 10,000+ reputation answering C#, .NET, Xamarin, and cloud architecture questions
- Founded and led XHackers Xamarin User Group Chennai organizing 20+ meetups with 500+ attendees
- Open Source maintainer for Xamarin/MAUI libraries with published NuGet packages (50K+ downloads)
- Conference speaker presenting on cross-platform development, cloud architecture, and modern engineering practices

AI-Assisted Engineering & Guilds

- Established Claude Code and GitHub Copilot guilds training engineering teams on AI-assisted development workflows
- Champion for LLM-assisted development including prompt engineering, code review workflows, and quality gates
- Running pilot programs for agentic AI and autonomous development use cases improving team productivity 30%+

Engineering Excellence & Innovation

- Pioneered AI enablement strategies using AWS Bedrock and Azure AI across multiple product lines
- Drove engineering culture achieving 80%+ test coverage and daily deployment cadence through TDD and CI/CD excellence

- Led modernization initiatives delivering 40-55% infrastructure cost reductions across platforms
- Built mobile applications serving 50K+ users with 4.5+ star ratings on iOS and Android

---

TECHNOLOGY LANDSCAPE

Platform & Engineering: .NET, C#, .NET Core, Blazor, ASP.NET, Xamarin, .NET MAUI, Angular, VueJS, TypeScript, JavaScript

Cloud & Infrastructure: AWS (Lambda, ECS, API Gateway, DynamoDB, Bedrock, Cognito, SQS, S3), Azure (AKS, Service Fabric, Event Grid, Front Door), Kubernetes, Docker, Infrastructure as Code

Data & Analytics: Data Warehouse Design, ETL Pipelines, MS SQL Server, PostgreSQL, MySQL, DynamoDB, Neo4j, TimestreamDB, SQLite, Entity Framework Core, Analytics Platforms

AI & ML: AWS Bedrock, Azure AI, Claude Code, GitHub Copilot, Agentic AI, LLM Integration, RAG Systems, Model Evaluation, AI-Assisted Development, Semantic Kernel

Integration & Platform: Kafka, REST/GraphQL APIs, Gateway Patterns, Event Grid, Message Queues, Microservices, Serverless, Event-Driven Architecture

---

EDUCATION

Bachelor of Technology in Computer Science
Sree Narayana Gurukulam College of Engineering, Kerala, India | 2011

AWARDS & RECOGNITION

- **CESITian Award** – Outstanding Technical Contribution (2018)
- **Best Upcoming Developer** – Vofox Solutions (2013)
- **Community Leadership Award** – Xamarin User Group Initiative
